

EOM260.02 – IDENTIFY ASPECTS OF BASIC AERODROME OPERATIONS

Teaching Points

- TP1 Discuss Basic Aerodrome Operations
- TP2 Explain the Role of Ground Controllers
- TP3 Explain that Ground Facilities and Services Assist With Aircraft Arrivals and Departures
- TP4 Explain What the Canadian Air Transport Security Authority (CATSA) Is and Outline its Duties

TP1 Discuss Basic Aerodrome Operations

3 Categories

- Air Traffic Control
- Ground Control
- Airport Maintenance

AIR TRAFFIC CONTROL

- Who is actually in control of the aircraft?
- Most would say that the pilot has control of the direction and course of the aircraft but they would be mistaken
- The task of ensuring safe operations of aircrafts falls on **air traffic controllers**
- They must **coordinate movements** of thousands of aircrafts, keep them at **safe distances** from each other, **direct them** during takeoff and landing, around bad weather and ensure that **traffic flows smoothly** with minimal delays

GROUND CONTROL

- Ground control is responsible for the airport “**manoeuvring**” areas, or areas not released to the airlines or other users.
- This generally includes all **taxiways, holding areas, and some transitional aprons or intersections** where aircraft have arrived and vacated the runways and departure gates.

AIRPORT MAINTENANCE

- Airport maintenance is responsible for a variety of airport field maintenance work, including **general maintenance** and **construction work**
- They operate equipment and service a variety of power and general maintenance equipment in the **upkeep of runways, taxiways, and aprons** as well as perform other related duties.

TP2 Explain the Role of Ground Controllers

- The goal of ground controllers is to **maintain aircraft** in such a manner as to assure safe flight
- They provide clearance for aircraft-to-taxi on the ground at the aerodrome while creating a safe environment while an aircraft is on the ground.
- Once an aircraft has landed, **ground controllers provide taxi information** to pilots about passenger gates and jetways.
- **Marshalling personnel assist aircrafts** when arriving at and departing from passenger gates and jetways.

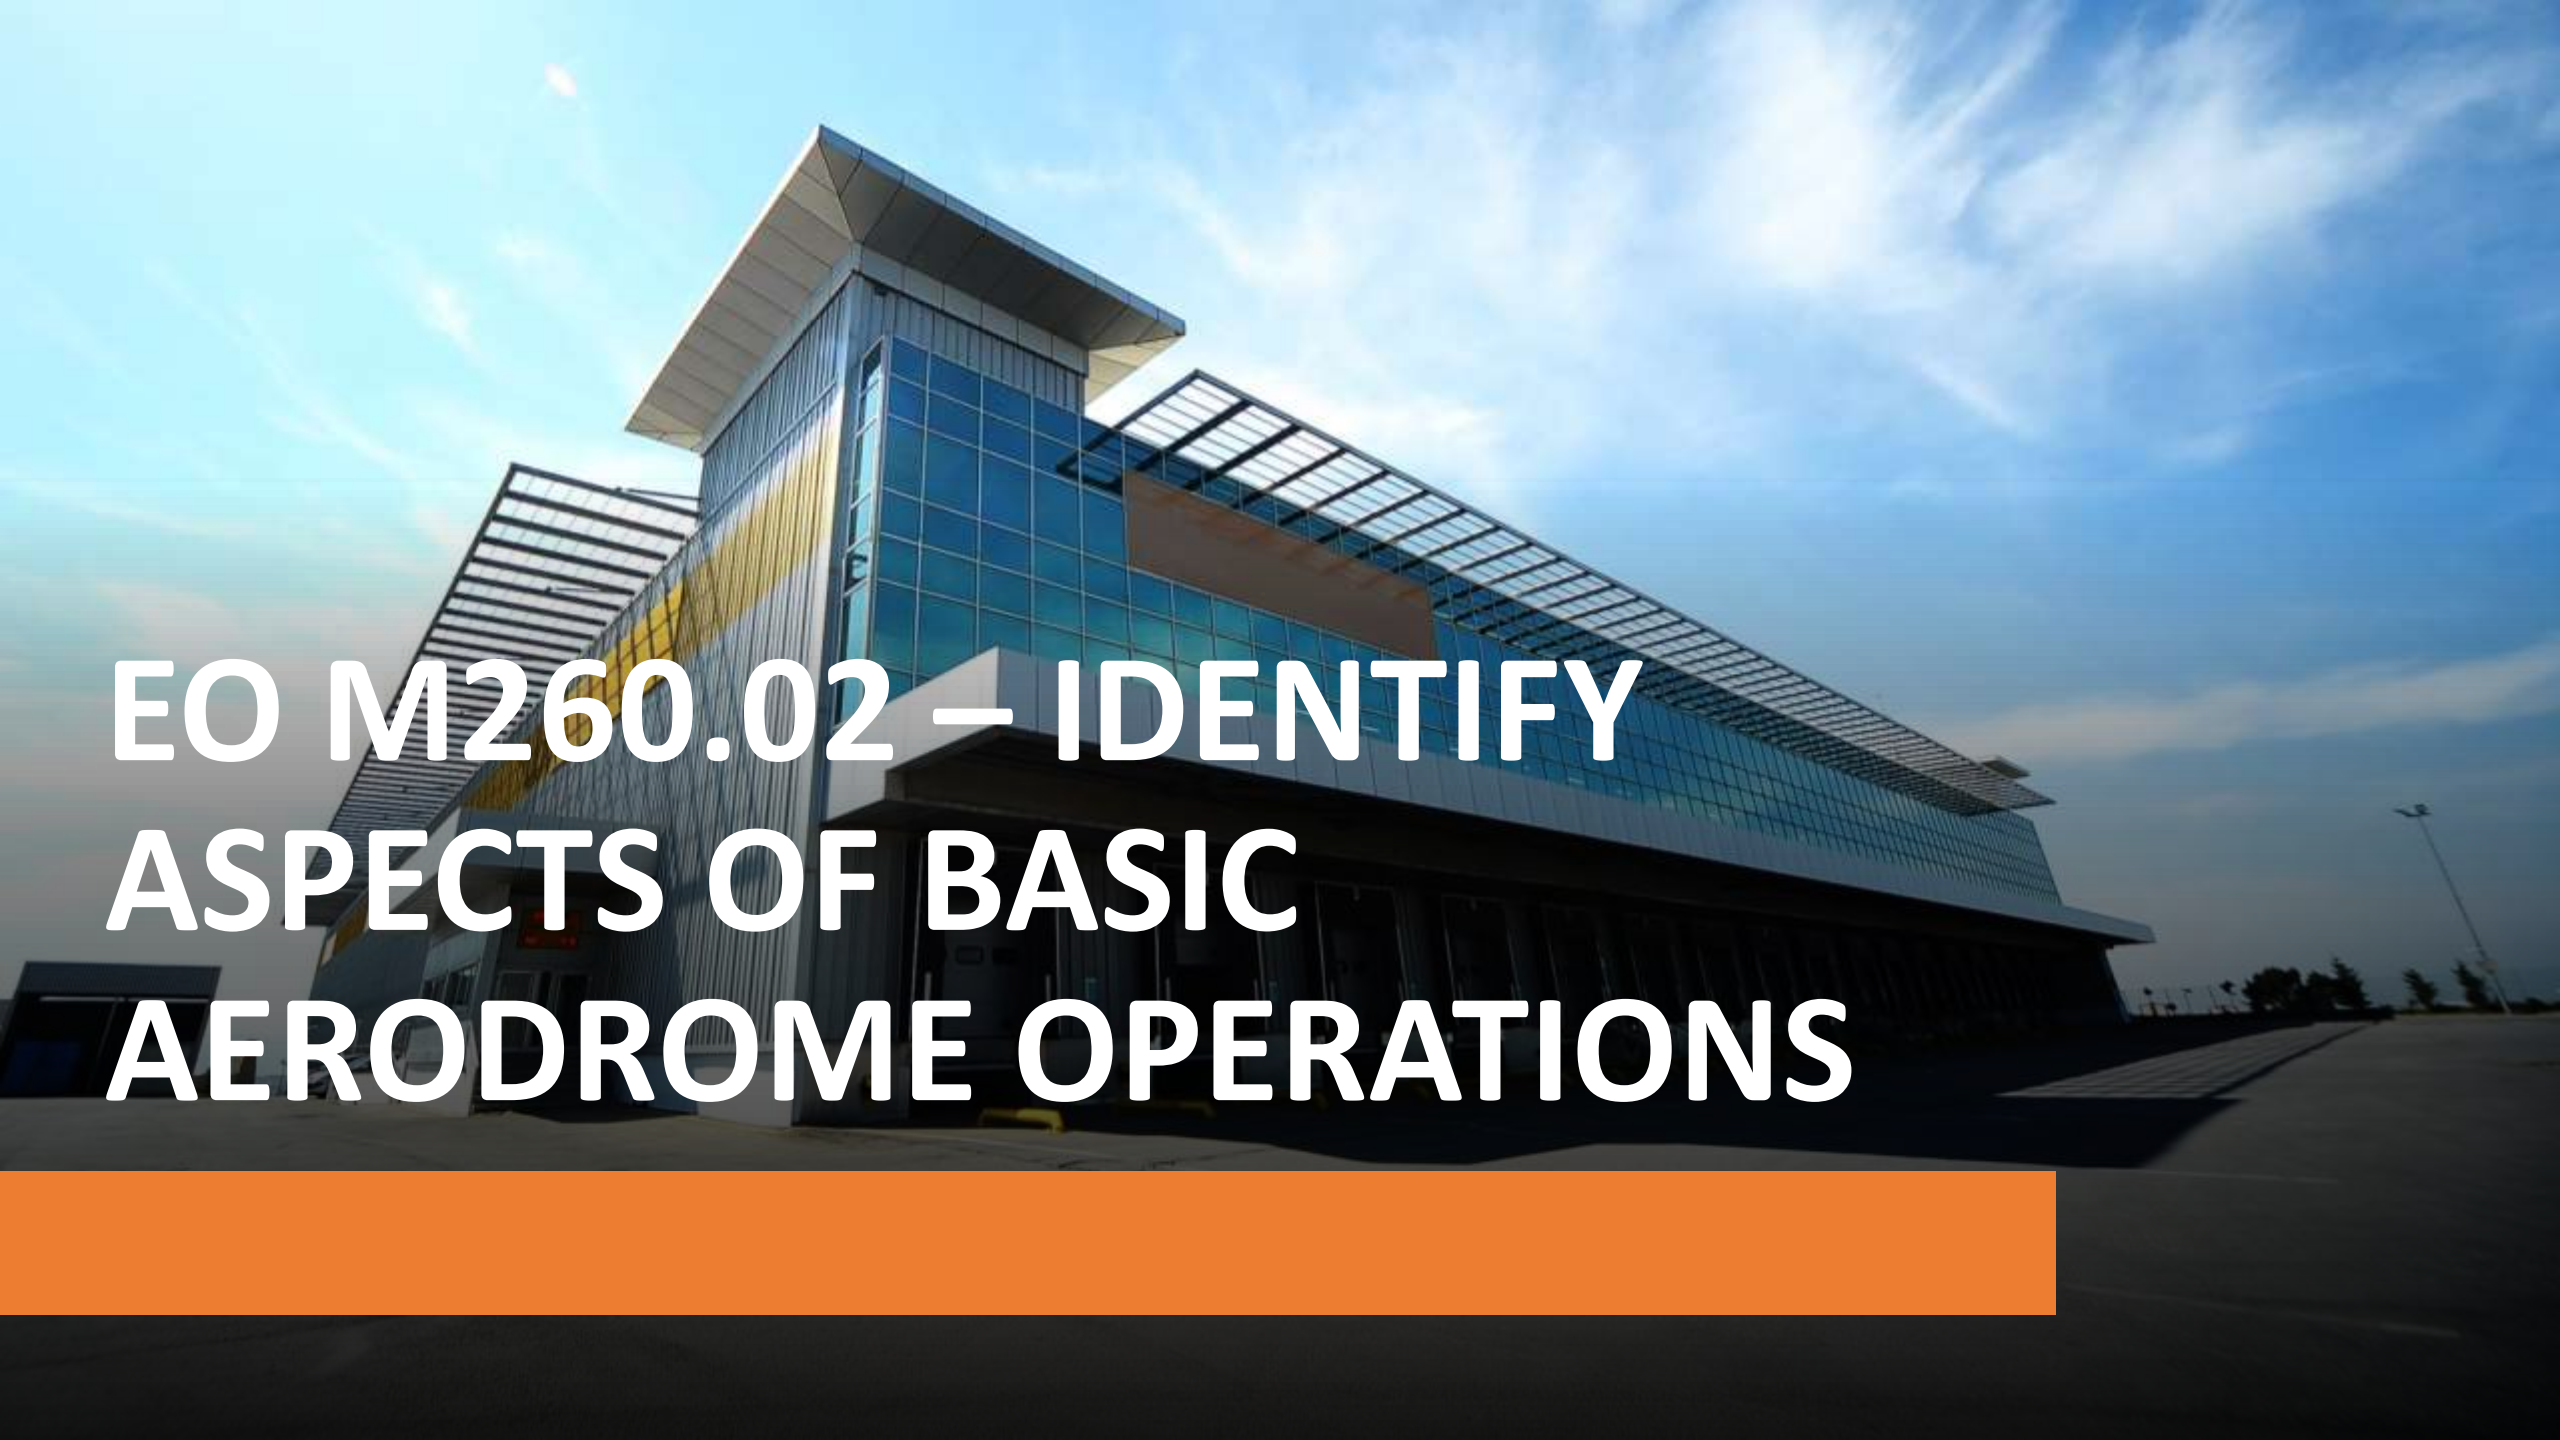

TP3 Explain that Ground Facilities and Services Assist With Aircraft Arrivals and Departures

- Ground facilities and services assist with aircraft arrivals and departures.
- RUNWAY MAINTENANCE
- RUNWAY LIGHTING
- BAGGAGE HANDLING
- FUEL STORAGE SYSTEMS
- DE-ICING/ANTI-ICING

TP4 Explain What the Canadian Air Transport Security Authority (CATSA) Is and Outline its Duties

- **CATSA works with ground control to protect the public by securing critical elements of the air transportation system as assigned by the government**
- **Screening of Passengers and Belongings**
- **Usage of Explosive Detection Systems**
- **Contracting for RCMP policing services**
- **Implement the Canadian Air Carrier Protective Program**
- **Implement a restricted area identification card**
- **Non-Passenger Screening entering airport restricted areas**
- **Supplemental airport policing**

EO M260.02 – IDENTIFY ASPECTS OF BASIC AERODROME OPERATIONS
