

EOM240.01 – EXPLORE CURRENT ADVANCEMENTS IN AEROSPACE TECHNOLOGY

By:

Teaching Points

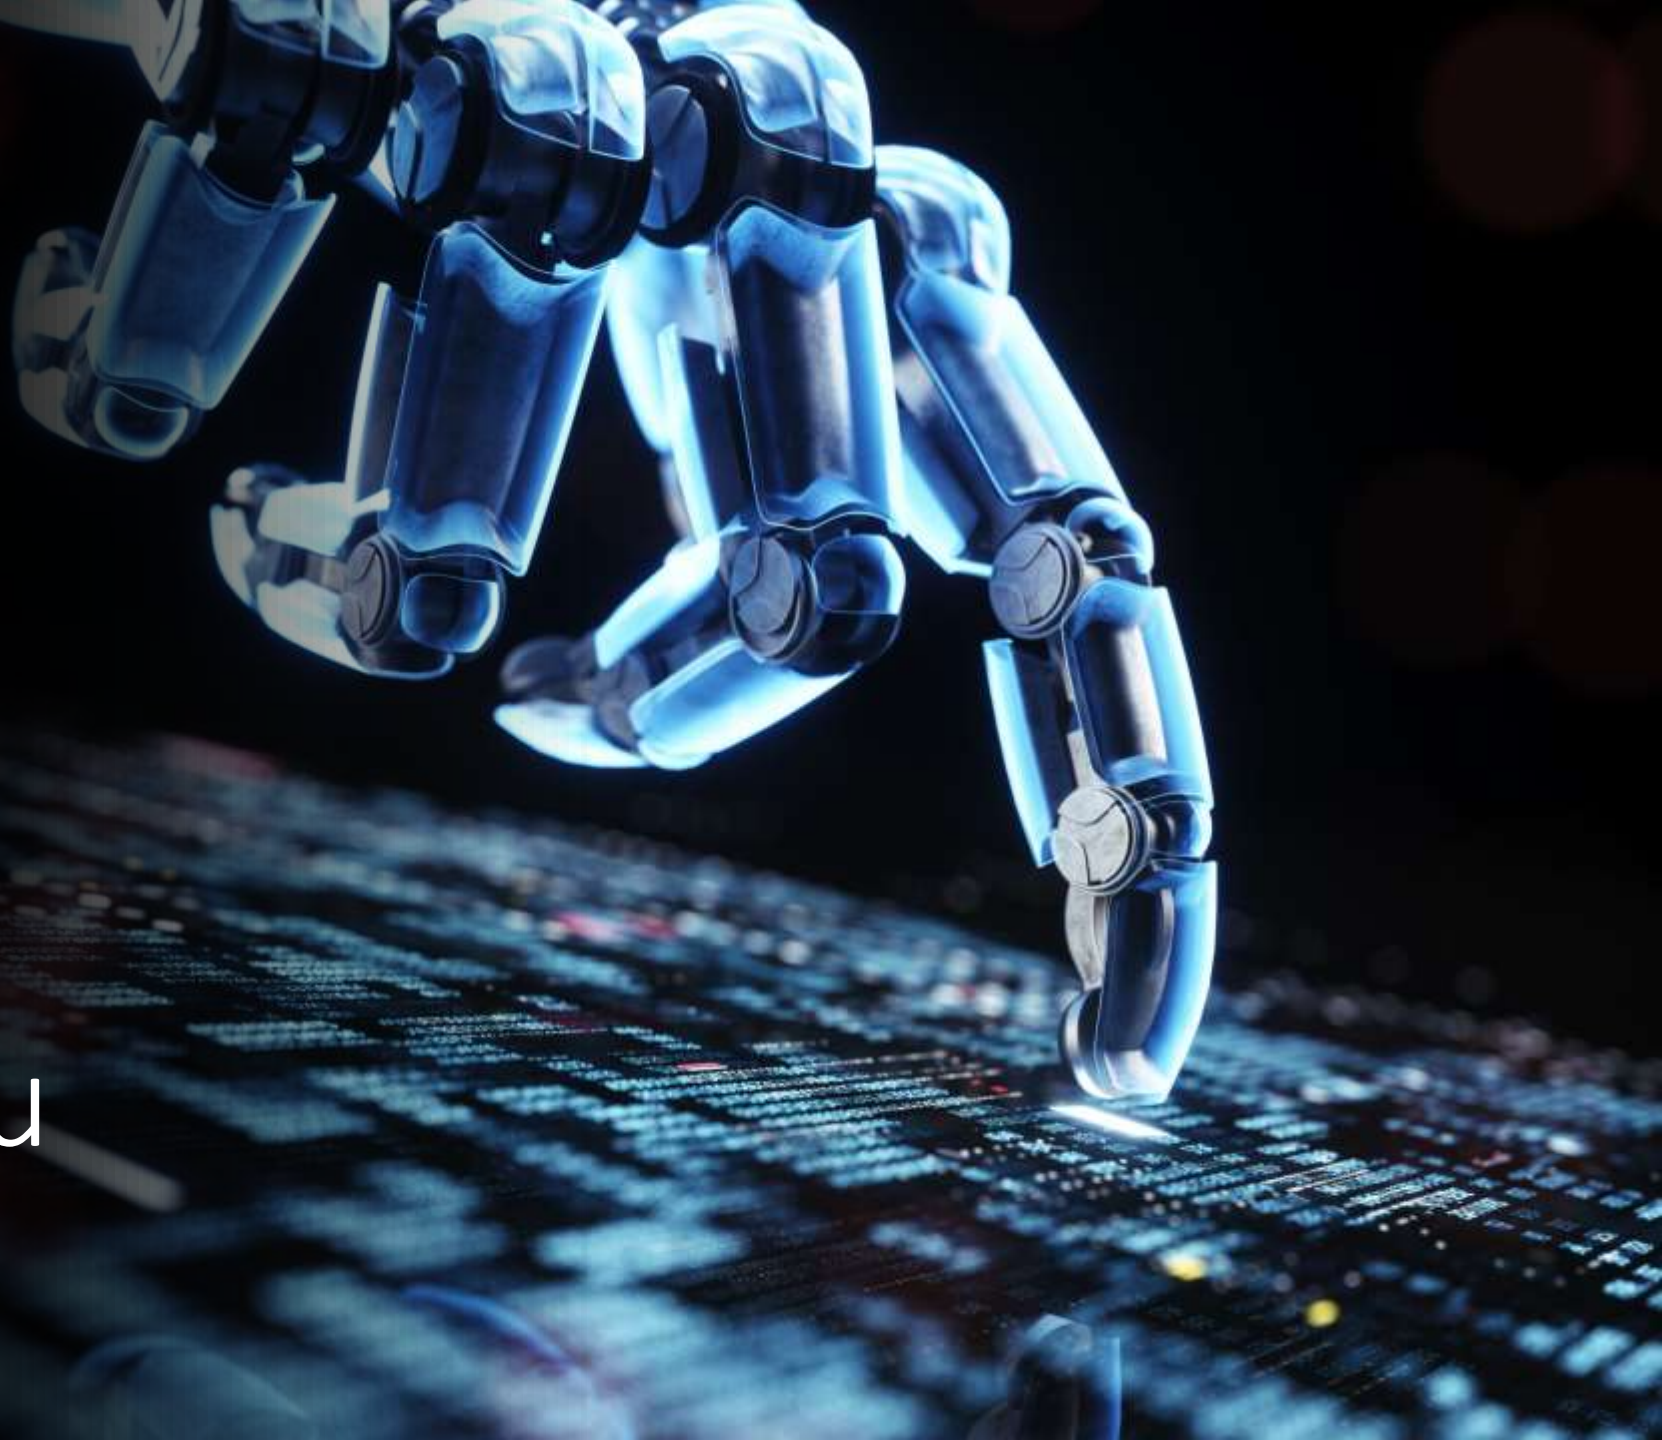

**TP1 Conduct an Activity
To Explore Current
Advancements in
Aerospace Technology**

What are some current advancement in aerospace technology that has impacted Earth today?

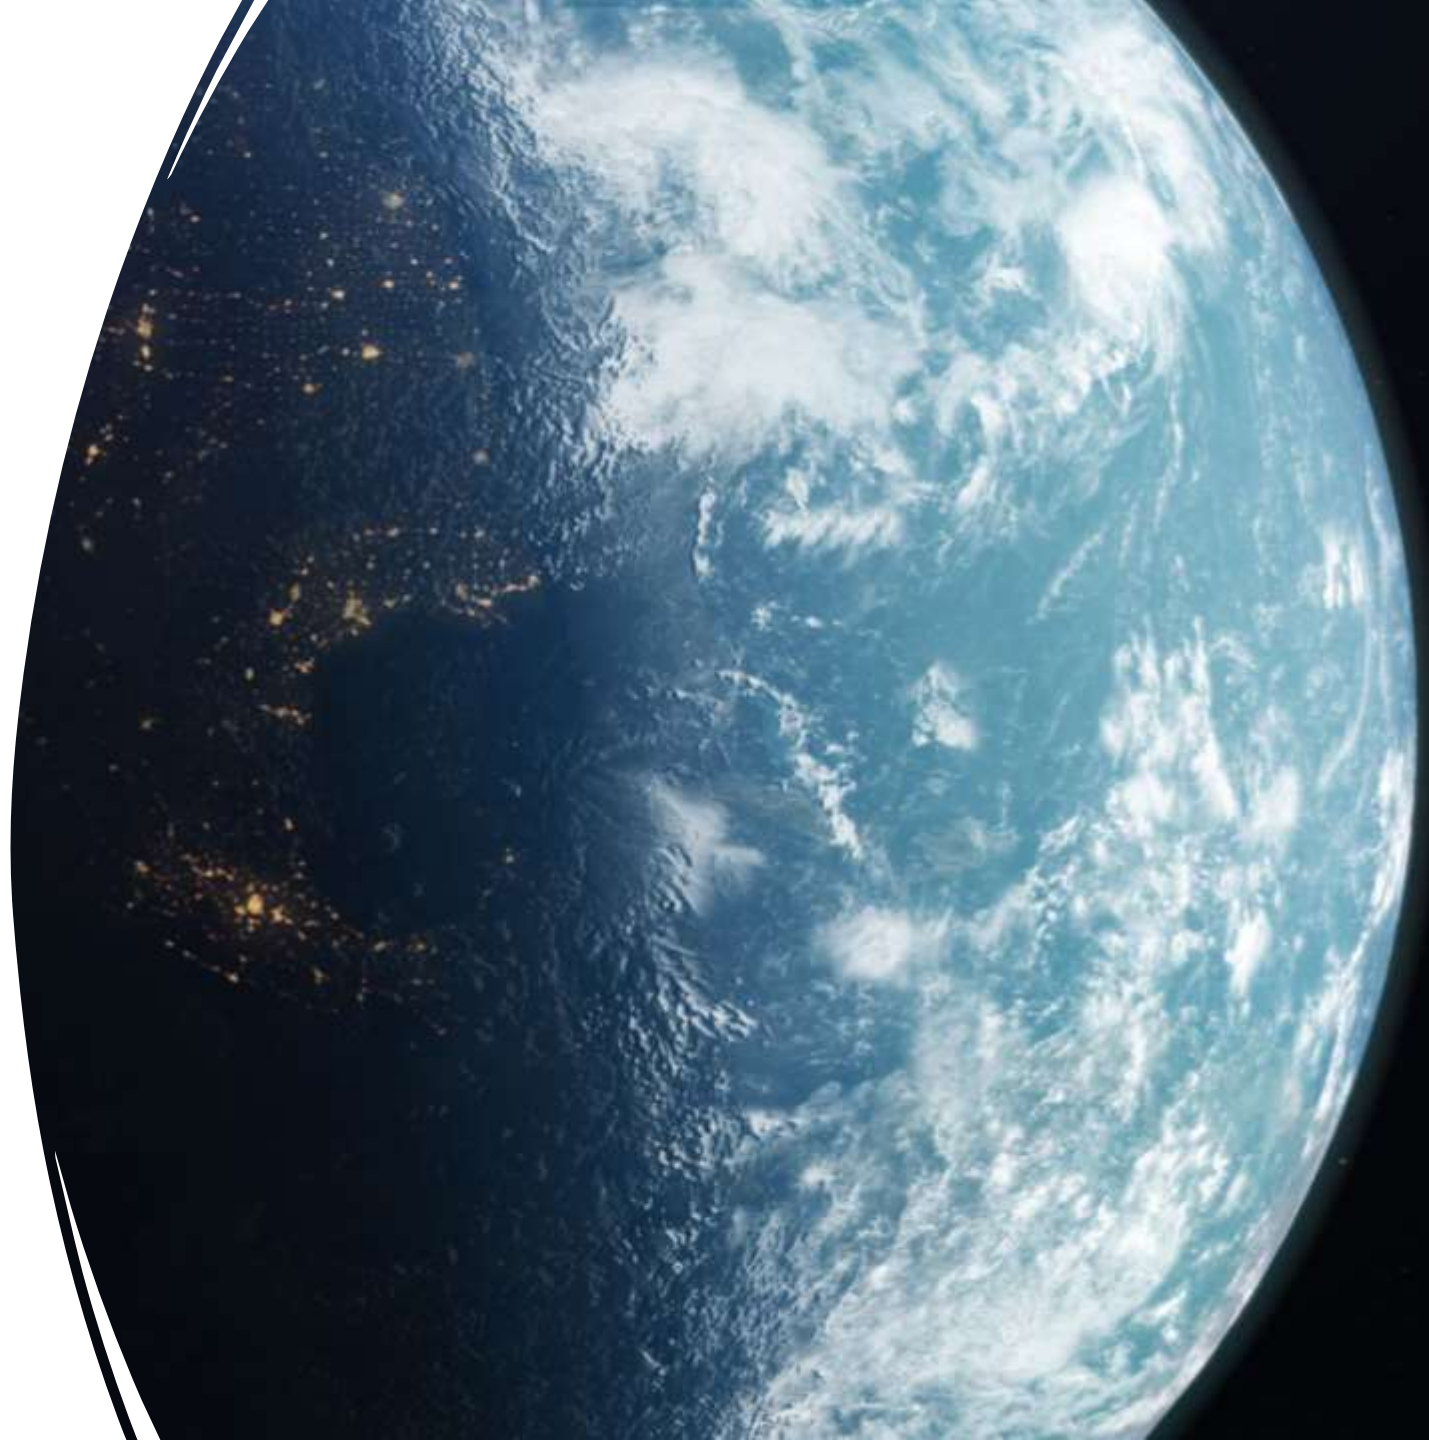

- **Satellite radio**
- **Video image stabilization and registration**
- **Satellite TV**
- **DeBakey blood pump**
- **Global positioning system (GPS)**
- **Temper foam**
- **Advanced communications technology**
- **Fire-resistant aircraft seats**
- **Excimer Laser Angioplasty System**
- **Liquid-cooled garments, etc.**

What
advancement
in aerospace
technology is
of most
interest to you
and why?

What is a current technology item in use today designed by the Canadian Space Agency?

- **The Canadarm**
- **The Canadarm 2**
- **The Canadarm 3**
- **Bio-Monitor**
- **RADARSAT**

A photograph taken from the International Space Station (ISS) showing a view of Earth from space. The Earth's surface is visible, showing a mix of dark land and bright, glowing orange and yellow areas that appear to be fire or intense heat, possibly a volcanic eruption or a large fire. In the foreground, parts of the ISS are visible, including a large, white, rectangular structure with a grid-like pattern, likely a solar panel or a part of the station's framework. The overall scene is dark, with the bright colors of the Earth's surface providing a stark contrast.
